# INJECTION-LOCKED HIGH POWER OSCILLATOR FOR ADVANCED GRAVITATIONAL WAVE OBSERVATORIES

Cuvillier Verlag Okt 2015, 2015. Taschenbuch. Book Condition: Neu. 210x149x14 mm. Neuware - One approach to detect gravitational waves, which have been postulated by Albert Einstein in his General Theory of Relativity, is based on interferometric measurements of length variations with a large-scale Michelson interferometer. The detection range of these ground-based observatories is currently limited to approx. 15 Megaparsec (Mpc) because of a reduced sensitivity at detection frequencies of 10 Hz - 10 kHz by shot noise. These limitations can be overcome by an...
