Book Condition: New. Publisher/Verlag: Springer, Berlin | The Scientification of Gastroenterology During the 20th Century Science contributes to medicine in three ways: It provides a body of relatively secure knowledge. Some of that knowledge has been applied to develop technologies which have had a major impact upon the practice and effectiveness of medicine. Last, science offers to medicine a way of thinking. - 1. McCormick [(1993) The Contribution of Science to Medicine. Perspect. Bioi. Med. 16,315.] Awareness of the digestive system began with the dawn of civilization, when man, observing the feeding habits of animals in the surrounding environment, experimented with foods, edible and inedible. Identity came with discoveries of the digestive organs during the 16th and 17th centuries. Function was revealed by physiologic studies of digestion, absorption and secretion, metabolism, and motility during the 18th and 19th centuries. Diagnostic access improved with the technological advances of the 20th century. Understanding of gastrointestinal (GI) disease followed the growth of the basic sciences and gastroenterology's involvement in scientific research during the latter half of the 20th century. Early in the 20th century, gastroenterology was yet an undefined activity without clinical or scientific guidelines. Diagnostic approach to the digestive tract was minimal. Valid concepts of disease were lacking. Visceroptosis, sitophobia, and "colonic autointoxication" were common "diagnoses." Therapeutic resources were scarce. | Part I. Colorectal Physiology Absorption-Secretion and Epithelial Cell Function Pradeep K. Dudeja, Ravinder Gill, and K. Ramaswamy Normal Motility and Smooth Muscle Function Mary Francis Otterson Neural Regulation of Colonic Motor Function Kenton M. Sanders and Terence K. Smith Mucin and Goblet Cell Function Samuel B.
