

A Review of degradation status of the Mau Forest and Possible Remedial Measures

By Robert Ochieng

GRIN Verlag Nov 2010, 2010. Taschenbuch. Book Condition: Neu. 210x148x2 mm. This item is printed on demand - Print on Demand Neuware - Essay from the year 2009 in the subject Forestry / Forestry Economics, grade: 8, Wageningen University, language: English, abstract: Deforestation and degradation of forests continue at alarmingly high rate, particularly in the tropics. Kenya's annual deforestation rate is estimated at 0.5%, putting at stake the survival of the timber industry and livelihood of forest dependent communities. The Mau forest is one of few remaining indigenous forests in Kenya with high deforestation rate. The forest supports the livelihood of the indigenous and surrounding communities and is major water catchment for the Eastern Africa region. This paper discusses the importance of the Mau forest and impacts of its degradation on the indigenous, national and regional communities, and proposes possible strategies to curb degradation of the forest. It is shown that degradation of the forest stems from activities of the surrounding communities, overpopulation and weaknesses in national laws and their enforcement. Several strategies are suggested; including involvement of the indigenous community in forest management, population control and the implementation of far reaching reforms in the forest and land sectors....
